Summary

Full Stack AI Engineer and Founder with expertise in architecting scalable SaaS platforms, high-performance browser extensions, and real-time data pipelines. Proven track record of shipping production-grade software using Node.js, Next.js, and Puppeteer. Skilled in algorithm optimization, cross-functional team leadership, and product lifecycle management.

Skills

Languages: JavaScript (ES6+), TypeScript, SQL, HTML5, CSS3/Tailwind, Python, C

Frameworks: Next.js 14, React, Node.js, Express, Puppeteer, GSAP, Three.js

Tools & Infrastructure: Docker, Supabase, Firebase Auth, Stripe API, Git, Railway, Render, Figma

Projects

Grabs AI (B2B SaaS Platform) | *Node.js, Puppeteer, Next.js 14, Supabase, Stripe*

- **Architected a credit-gated lead generation SaaS** automating business discovery; engineered a 6,000+ line Node.js backend handling 50+ concurrent grid-based search instances via Puppeteer.
- Developed a **multi-pass enrichment pipeline** with coordinate mapping and fuzzy deduplication, achieving a **98% data accuracy rate** and eliminating duplicate leads across global regions.
- Deployed resilient infrastructure using **Docker and Railway**, featuring environment-aware Chromium detection, dual-layer credit storage, and real-time SSE (Server-Sent Events) for zero data loss.

AutoCod (Chrome Extension) | *Manifest V3, MediaRecorder API, Firebase*

- **Engineered a screen recording tool** capturing 60 FPS video at 8 Mbps bitrate; utilized **Canvas2D** for real-time post-processing, gradient rasterization, and macOS-style beautification effects.
- Solved vertical scrolling issues by creating a custom **stitching algorithm** with sticky-header compensation, ensuring **100% page coverage** across 200+ tested real-world websites.
- Integrated custom **Firebase Authentication** via REST (eliminating SDK bloat) to manage secure sessions and Google OAuth flows within strict Manifest V3 security constraints.

Cozy Starfall (Productivity Tool) | *Vanilla JS, HTML5 Canvas, Local Storage*

- Built a performance-critical extension using a custom **Canvas 2D rendering engine** to simulate physics-based particle effects (fireworks, meteors) at a stable **60 FPS** on high-DPI displays.
- Designed an ETL pipeline to ingest/normalize browsing history into interactive quick-links, achieving **<100ms startup time** with zero external dependencies (962 lines of optimized code).

Experience

Founder and CFO

Jan 2024 – Apr 2024

Wiselayer (On-site)

- Spearheaded product launches and technical timelines; directed daily operations to enhance fulfillment efficiency.
- Developed Power BI dashboards to visualize revenue trends, enabling data-driven strategic decisions.

Founder and CEO

Aug 2023 – May 2024

Pak Saaf (On-site)

- Led product lifecycle of a manufacturing startup, managing sourcing, packaging design, and strategic roadmaps.
- Oversaw finance and accounting, applying analytical skills to monitor budgets and drive operational stability.

Education

Virtual University of Pakistan

July 2025

Bachelor of Science in Computer Science (BSCS)

Superior College

2022 – 2024

Faculty in Science (FSc), Pre-Engineering

Grade: B
